SUMMARY

Junior Penetration Tester with 1 year of experience in Web and Network Penetration Testing and VAPT, skilled in identifying OWASP Top 10 vulnerabilities (SQLi, XSS, IDOR, Authentication Bypass) using Burp Suite, Nmap, Metasploit, Nessus, and Wireshark. Proficient in Python/Bash automation with strong knowledge of Linux, TCP/IP, and SSL/TLS. Bringing 2.5 years of infrastructure experience at Accenture; ISC2 CC and Google Cybersecurity Professional Certificate holder, pursuing eJPT , seeking Penetration Tester or Application Security roles.

SKILLS

Penetration Testing: Web application, API, Infrastructure, IoT, Network, Thick client testing.

Security Tools: Burp Suite, Metasploit, Nessus, Nikto, Nmap, Wireshark

Cloud & Infrastructure: AWS, IBM MQ, Kafka, Linux (Kali, Ubuntu), Microsoft Azure

Security Frameworks: OWASP Top 10

Programming & Scripting: Bash, HTML, JavaScript, PHP, Python

Soft Skills: Analytical thinking, Continuous learning attitude, Documentation and reporting, Team collaboration

EXPERIENCE

Infra Managed Service Associate

Accenture **June 2023 - November 2025, Bengaluru, Karnataka**

- Administered and maintained Kafka and IBM MQ clusters, overseeing setup, configuration, patching, and system performance.
- Implemented security controls including SSL/TLS encryption, authentication, and access policies to safeguard message queues.
- Coordinated with Linux and security teams to integrate middleware hardening into CI/CD pipelines.
- Conducted internal audits, document incidents, and prepare RCA reports aligned with security standards.
- Ensured high system availability with proactive monitoring and automated health checks.

Junior Penetration Tester

Cyfosis Cyber Solutions **April 2022 - May 2023, Trivandrum, Kerala**

- Performed manual web and network penetration testing on simulated client systems following OWASP and NIST methodologies.
- Executed vulnerability scanning and exploitation using Burp Suite, Nmap, and Metasploit, identifying flaws such as SQLi, XSS, and insecure authentication.
- Assisted in threat modeling, post-exploitation, and privilege escalation exercises in controlled environments.
- Collaborated in internal capture-the-flag (CTF) challenges and red team simulations.
- Conducted vulnerability assessments for 12+ web applications over a 6-month period using Nessus and OpenVAS, pinpointing an average of 18 critical and high-severity vulnerabilities per project to support remediation strategies and compliance tracking.
- Analyzed network traffic over a 6-month period with IDS/IPS tools (Snort, Suricata) to detect and validate intrusion attempts during 15 penetration testing projects, enabling clients to reduce false positives by 30% and enhance incident response protocols.
- Tested HTTP/S protocols for 12+ client web applications over 6 months, leveraging Burp Suite and Wireshark to identify and exploit session fixation and insecure redirect issues, decreasing average time-to-remediation by 24% during vulnerability lifecycle management.

PROJECT

IoT Device Penetration Testing – Simulated Home Network

- Conducted a security assessment of IoT devices within a simulated home network environment.
- Developed a custom Python-based scanner integrating Nmap and Nikto frameworks to automate service discovery and vulnerability checks.
- Identified insecure services (Telnet/FTP), outdated firmware, and weak default credentials.
- Delivered a comprehensive report aligned with OWASP IoT Top 10, including mitigation strategies for firmware security and network segmentation.
